

PETITION

Sign the petition: No More Limiting Dilution!

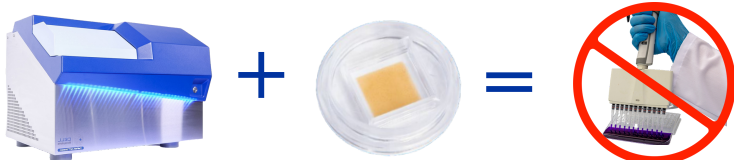

Now that there is an affordable, more efficient method to get colonies from single cells, it no longer makes sense for our lab to continue to use limiting dilution for generating monoclonal colonies. Limiting dilution is time-consuming, inefficient, and requires more plastics and media than is required with CellRaft® Technology.

With CellRaft Technology, we will also get an image showing that the colonies generated came from single cells — *can't get that with limiting dilution!*

Sign the petition below to show your support for putting an end to continuing to perform limiting dilution to generate clones in our lab.
